The most common uses of Photoshop include: Editing photographs. This is the most common reason for using Photoshop, though it can be done with other programs such as GIMP. Creating artwork, such as logos, icons, and other graphics. More and more, the newest generation of graphics tablets make it possible to draw with actual ink, no pen required. And while this is fun for doodling, many Photoshop artists find themselves using this type of task in lieu of a traditional pen and paper. However, anyone can use Photoshop without fear. Photoshop is free, open-source software, and you don't need to buy any expensive software, such as Photoshop Elements or Paint Shop Pro, to run it. The huge range of settings available in Photoshop can be daunting to the beginner. But I want to show you exactly how to use Photoshop's customization features to your benefit. You can use Photoshop for any of these purposes or for both. In Part 2, I'll show you how to use the different editing tools in Photoshop.

In Part 3, I'll get into the different layers you can use, how to organize your images and selections, and the different blending modes and layer settings you can use to create some powerful effects. Learning Photoshop Photoshop is powerful, full-featured software, and even if you've used it before you'll probably need some time to become familiar with its capabilities. The following are several tips that will help you get started. Read a Photoshop book. There are many great books about using and understanding the software. Reading the manual can help a great deal when you first start. In addition to a manual, we suggest you use a book like *The Power of Adobe Photoshop CS5 Mastering the Complete Suite of Digital Imaging Tools*, Second Edition by Richard Rosenfeld, Jason Salzenstein, and Tom Worthington (published by Wiley Publishing, Inc.). Use practice files. If you don't have access to Photoshop CS5, you can still find great resources online for learning this powerful software.

For example, you can use a free trial version of Photoshop available on the Adobe website to practice, using several free practice images you can download from there as well. Photoshop has a learning curve, just as any other software tool does. If you're a seasoned veteran, the learning curve will be fairly easy for you. But if you're new to the software, you may need to experiment a bit

Q: Combine variables into an array with Perl I have variables that I want to combine into an array, but can't work it out. I have two variables which look like so: my \$PICK = '12:32:13'; my \$DET = '02:03:43'; How can I combine these variables into an array like so? array ('PICK' => 12:32:13, 'DET' => 02:03:43); A: use strict; use warnings; use Data::Dumper; my (\$p,\$d) = ("12:32:13", "02:03:43"); print Dumper (\$p,\$d); Result: \$VAR1 = { 'PICK' => '12:32:13', 'DET' => '02:03:43' }; A: You could do this fairly easily with Data::Dumper: use strict; use warnings; use Data::Dumper; my \$PICK = '12:32:13'; my \$DET = '02:03:43'; print Dumper \%(\$PICK, \$DET); This outputs the following: \$VAR1 = { 'DET' => '02:03:43', 'PICK' => '12:32:13' }; The confocal microscope is a scanning probe microscope in which the sample is placed on the aperture of a focusing element. The reflecting optics on this focusing element are used for scanning the aperture in order to detect light coming from a point within the sample. The focusing element is located inside a confocal cavity that collects and collimates the beam to a single point on the sample. The confocal cavity can be evacuated or filled with a dielectric fluid (immersion liquid). The confocal microscope offers a useful tool for non-destructive analysis of a sample, such as, for example, a layer of biological tissue. For illumination and/or detection of the sample,

Ultrasound imaging for assessing carotid artery stenosis in patients with and without suspected acute carotid ischemia. To assess the safety and efficacy of high-resolution gray scale (GS) and colour Doppler ultrasonography (US) in detecting proximal carotid artery stenosis in patients who are at high risk of ischemic stroke. Thirty-two consecutive patients with suspected acute carotid ischemia underwent both GS and colour Doppler ultrasonography to detect carotid stenosis >50% and to detect hemodynamically significant (>70%) carotid stenosis. For each vessel, the grade of stenosis was defined as follows: 90% (extreme). The sensitivity and specificity of US for detecting stenosis >=50%, >=70% and >=90% were 100% and 100%, 92% and 93% and 66% and 67%, respectively. The sensitivity and specificity for detecting hemodynamically significant stenosis >=70% were 100% and 93% for GS and 89% and 89% for colour Doppler. Eight patients had acute ischemic stroke Q: Looking for 5S Recognition model for fitness tracker I am looking for a model for a self build fitness tracker or smartwatch. It should be fit, very quiet and support 5S by 1.4Ghz USB frequency. E.g. seems like the wristbands of the Elliptic and the Fitbit 5 are able to recognize the sensors. I did find this Flexifit bracelet which seems to meet all requirements. But I was wondering if it was the only known model or not. A: According to this, those bands are marketed as a "Smart Band": Smart bands utilize
