* Functions for importing/exporting graphics/data into the drawing (grids, drawings, images, etc.). The Import/Export/Send features make it possible to implement custom solutions. * Math routines. * Data-linked library, which facilitates integration with other applications. * Data streams. * Data conversion (text/image/bitmap to/from other formats). * Encryption/decryption. * Data compression. * Events and message

delivery. * Measuring/geometry calculation. * All of these functions are accessible from the VBA code for B++ programming. # Chapter 18 AutoCAD Visual LISP * * * # The AutoCAD Visual LISP Language AutoCAD Visual LISP is a programming language that was developed to automate tasks in AutoCAD. It is designed to help AutoCAD developers by presenting their code in a more visual and appealing way. AutoCAD Visual LISP helps you to program much faster than you normally could. It provides an intermediate level of abstraction between AutoCAD and the code that is written. It supports both procedural and object-oriented programming. It also gives you an object-oriented-style syntax that is very similar to the Visual Basic language. The syntax is easy for novice programmers to use. AutoCAD Visual LISP is one of the best reasons for AutoCAD users to continue using AutoCAD! You can download the latest version of Visual LISP from the AutoCAD Application Store. The Visual LISP

language is integrated with AutoCAD and is part of the Command Reference. However, it is available only for AutoCAD 2010 and AutoCAD LT 2010. * * * ## Programming Steps 1. Open the Visual LISP application. 2. In the upper right-hand corner of the dialog box that appears, click ****Add New Project****. 3. Select the type of project. You can select ****Visual LISP Command Module****, and then click ****Add****. 4. In the dialog box, which displays the project properties, set the options as desired. If you want, you can give the module a meaningful name and specify the language it ca3bfb1094
