Game Introduction: In the Lands Between, the Fallen—a race of people born in the stars—and the Elden—a race of immortals who preside over an evil empire—are enemies. Into this conflict, a woman called Regnetta arrives, and she has the power to bestow the power of "Fallen" on all the "Numen" (Fallen) in the world—and she is the one person who can do something about the conflict. That's all we'll tell you for now. Gameplay tips: You have the ability to jump twice in a single action. Each enemy you defeat has a certain amount of experience, and the amount varies according to the degree of your use of dark magic. Although the experience is shared among your party members, if you join the battle as a main character (you can become a main character once per battle), you will lose your experience. Keywords: STORY TENSE CONFLICT ADVENTURE GAMEPLAY ASYNCHRONOUS Please enjoy the gameplay demo which was made available on December 6, 2016. The game we are going to show you in this introduction is set to be released on PS4, Xbox One, and PC at the end of 2016. A date will be announced closer to the release. The information we have so far for the game is as follows: Story: In the Lands Between, the Fallen—a race of people born in the stars—and the Elden—a race of immortals who preside over an evil empire—are enemies. Into this conflict, a woman called Regnetta arrives, and she has the power to bestow the power of "Fallen" on all the "Numen" (Fallen) in the world—and she is the one person who can do something about the conflict. That's all we'll tell you for now. Tense: There is a deep emphasis on suspense in this game. You have to determine whether or not you can escape danger. All the relationships between the characters are realistic and are filled with ambiguity. In addition, there are different endings for every storyline, and you have to use your brain to determine whether you can leave the world you have come to know.

=====[New possibilities in the family planning
of women on depot-progestogen therapy]. We analyzed the
pregnancy rates observed in 431 young, fertile women on Depo-
Provera therapy. The pregnancy rate before treatment was
24.9%, i.e., 10 of 40 patients became pregnant. The pregnancy
rate after treatment with Depo-Provera, 100 micrograms-

was 20.5%. Considering only those patients who achieved first
pregnant cycles within 6 months of treatment with Depo-
Provera, the overall pregnancy rate after 6 months from the
start of therapy was 19.2%. A group of 225 fertile women were
offered fertility testing. The spontaneous pregnancy rates
following testing were 20.9 and 14.9% in those receiving HCG
alone and those receiving ovulation inductions. These results
indicate the advantages of HCG administration or GnRH
analogues for stimulation of ovulation during Depo-Provera

Pre-treatment with anti-WT1 antibodies plus paclitaxel combined with radiation did not potentiate the drug effects, and pre-treatment with antibodies combined with radiotherapy was also effective in reducing tumor volume and in prolonging the survival of mice bearing xenografts of A2780 cells.
