Want to get a second screen and access data as easily as possible?. Here are four phones that look and work like a PC and are the best ones on the market.Q: How to join parts of string with delimiter using `sub()`? I have a string in form of a list of files names and am trying to join it with the delimiter space to get the filename of each file. I can access each element individually with the following code: `"test.txt_a" "test.txt_b" "test.txt_c"` And then can add an additional variable to it, say `a_c`, or `b_c`, etc. I then want to do the following: `test_c = sub(".*_c", "", "test.txt_c")` but this outputs: `test c` But what I'm trying to achieve is `test_c = sub(".*_c", "", "test.txt_c", "a_c")`

result = test_c = "test.txt_a"
