There are no reviews yet.Q: Why is positional usage more accurate? I read that if you are using a German dictionary, to be precise Bosworth, you can count on positional usage to be more accurate than the other ones: Can someone explain why? I don't expect an actual explanation: I want to see if there is a more or less technical term for this. A: Positional here refers to whether a word (noun or noun phrase) is a direct object or an object of a prepositional phrase. In German, nouns can be direct or indirect object (so they can also be prepositional objects), and so in German we have a distinction between definite and indefinite direct objects (direct in English). So sometimes you have a noun as a direct object of another noun, but in German the verb has only one object. In that case the verb takes a position as the object. German is no different from English in this respect. If there are two nouns (on position), then one is the direct object of the other, and the other is indirect object. EDIT: It is about the reason why German dictionaries prefer the term Positional Usage. Because of so called case-marking in German, an indirect object is expressed either with a case particle or with the genitive. So both ways exist. Now to the best of my knowledge there are no established rules how to analyse case-marking. One is free to use rules as he wants. And the most common rules, like the ones in Russian and German dictionaries are based on case particles being the most important, and omitting them on the other hand. A: Theoretically you can. In practice it is not always possible. Thinks for example are usually considered as indirect objects.
