main home page: A: The crackme.html file is created by the Python script and is not part of the git repository. In fact, the crackme.html file is a generic HTML file: Hotarareagadeschiderepunctdelucru of *Pectinatus* inclusions in plant tissues, i.e. as a hyper-vacuolation of the cell wall (b, c). More importantly, the cells are usually filled to the same extent, as can be seen in the figure. Typical examples of the first are in cork cambium (*Quercus suber*) (d) and parenchyma cells of *Morus alba* (e). Note the similar changes in the tunica and the endodermis with many of the cells being completely filled by *Pectinatus* inclusions.](bdj-07-e33851-g008){#F5367148} ![Light microscopic photographs. a) Flattened epidermis of a *Pectinatus* embedding in the cork cambium of *Quercus suber* showing the perforation of its cell wall. Note that the tunica and endodermis cells are not filled (scale bar = 2.0 mm). b) *Pectinatus* inclusions in cortical parenchyma cells of *Morus alba* (scale bar = 100 μ m). c) Two of the cells are completely filled with *Pectinatus* (scale bar = 10 μ m). d) The phloem is completely filled by *Pectinatus* (scale bar = 100 μ m). e) Transverse section of *Pectinatus* in the tunica (t) and endodermis (e) of *Morus alba* (scale bar = 10 μ m). f) Oblique section of the cortical parenchyma of *Morus alba*, clearly showing that some of the cells are filled, whereas others are still hollow (t -- tunica, e -- endodermis) (scale bar = 10 μ m).](bdj-07-e33851-g009){#F5367156} ![Ultrastructural photograph. a) *Pectinatus* in
