Historically, AutoCAD has been a dominant CAD program on the market. However, beginning in 2010, Autodesk announced a program called "Project Gutenberg," which was to be a separate, free-of-charge, high-resolution vector CAD product aimed at professional designers and architects. The "Project Gutenberg" product was cancelled in 2014. (The "Project Gutenberg" name also served as the name of a public domain text library initiative coordinated by the Open Source Initiative.) User groups, schools, universities and independent developers continue to develop add-ons, plugins, scripts and macros. There are also large numbers of web-based plugins available. AutoCAD can read most DWG files produced by other CAD programs, including Microstation (Siemens PLM Software), TopoJunction (Omnitracs), MicroStation (Siemens PLM Software), DGN/DXF (AutoCAD Users Group), DXF (Wadsworth Corporation) and PDE (AutoDesk-ECM) file formats. AutoCAD has a history of interoperability with Macromedia's Macromedia AutoCAD plugin. The DCX file format (used in earlier releases of AutoCAD) and PdsDXL (used in later releases) are among the older file formats that AutoCAD can read. It can also read other file formats, such as DWG2000, ACE, ACT, PCDWG, DWGS, TECO, and WPL. File formats AutoCAD supports are: AutoCAD DWG 2010, 2008, 2006, 2003, 2001, 2000, 1999, 1996, 1995, 1990, 1989, 1987, 1983, 1982, 1981, and AutoCAD LT or AutoCAD LT/2. (Starting with AutoCAD 2010, support for AutoCAD 1985 and 1985/2 was discontinued.) AutoCAD can also read many of the following: .dwg (ACL) .dwg, .dwgz, .dwgx (ACL) .dxf (AutoCAD Users Group) .pdf (Adobe) .ps (Adobe) .rfa (Adobe) .scad (Arcadis) .txt (Adobe) .vnd (Adobe) .vxd (Adobe) .xy (Ad

Open your desired Autocad file. It will open Autocad, and automatically open.DWG file. After you finish working on the drawing, simply export the data as a DXF file. You can also save as.DWF file to save all objects. 1. Field of the Invention The present invention relates to a method of restoring image data in a secondary storage apparatus in which a plurality of storage media each including a plurality of disks are mounted. 2. Description of the Related Art In general, various kinds of information are stored in an apparatus such as an information processing apparatus. There has been known an information processing apparatus in which a large-capacity storage medium such as a hard disk is used as a primary storage device. It is possible to restore data stored in the primary storage device by the use of a backup medium. In a storage apparatus in which a plurality of storage media are mounted, data is stored in a logical unit referred to as a LUN (Logical Unit Number) which is assigned to each of the storage media. If the storage apparatus is configured such that it includes a plurality of storage media, the LUN is uniquely assigned to each of the storage media. When a plurality of storage media in a storage apparatus are damaged, it is necessary to restore data stored in the storage media. For this reason, when the data in the storage media is restored in the case where the storage apparatus is configured such that it includes a plurality of storage media, the data is restored in each storage medium, and then the data in the storage media is sequentially output from the storage apparatus. In a secondary storage apparatus in which a plurality of storage media are mounted, data is sequentially stored in the storage media of the secondary storage apparatus. When data is restored, in the case where the storage media are sequentially output from the secondary storage apparatus, it is difficult to restore the data from the secondary storage apparatus to a state in which the data is in the secondary storage apparatus. Further, in the case where a plurality of storage media in the storage apparatus are damaged, it is difficult to restore data in the storage media to a state in which the data is in the storage media. In a storage apparatus in which a plurality of storage media are mounted, the storage apparatus is configured such that a plurality of storage media are mounted on a shelf in the storage apparatus. In this case, in the case where the capacity of the storage medium is excessively large, it is
