## **Slate Digital FG-X Mastering Processor VST RTAS V1.1.2 READ NFO-AiR 3 !!HOT!!**

full of subtle algorithms and the slate digital tone, this plugin contains our award-winning combination of slate's proprietary microgate technology and the legendary ssl algorithms. what makes this plugin distinctive is the way the sound 'winds' across the stereo spectrum, rather than fading away, as you'd expect. if you're familiar with the classic 70's designs of the legendary roger linn, this algorithm will be instantly recognisable to you, and can be used for a wide variety of applications in any daw, from the bass line to the lead vocal. the slate digital compressor was designed by slate to make use of his proprietary microgate technology, which allows the sound to be sculpted without altering the tonality of the audio. we've seen a ton of processors in the market that rely on generic or highly non-linear algorithms to achieve the same kind of results, but what works well for a drummer will sound poorly and overly processed if applied to orchestral or vocal material. this plugin has been in the works for quite a while now. slate digital was a bit hesitant at first to release the fg-x mastering processor, but finally did so. i used it on every track in this mix and it did a wonderful job of mastering my mix. i highly recommend it to other producers out there. fantastic vocal processing. i used 2x the plugins on this track, but i was still left with a few weeks worth of compression to go. the slate digital bundle gave me everything i needed in one shot. the slate digital bundle is the only plugin bundle i would ever recommend to others. i have used plugins from other companies in the past, and i can honestly say this is the only plugin bundle i will be using in the future.
