im not in any way affiliated with these sites and have not been paid to promote them. ive just tested out their products and think theyre great. theyve gone out of their way to make their software free to download. check them out. note that not all obd2 adapters will work with all obd2 software, so it is important to check that your intended laptop meets your requirements before buying. and if you dont plan to upgrade your laptop, you can also get a standalone, usb-based adapter for your existing vehicle. the following link is to toads official website. theirs a good selection of software products and a good price. be aware that the majority of the products are limited to windows, and not all the sensors and functions are supported by all software packages. but they are very helpful and knowledgeable. here are the details: i had the following to say when i reviewed the free version of the software: the free version does a good job of telling you if your car is currently in a safe condition. the vehicle status screen, for example, shows whether the oil pressure is ok, the coolant temperature is within the range, and so on. it also warns you if youre running too high or too low. i am sure that it could be improved upon. this comparison is a great way to find out which obd2 scanner software will work for you. i have found that the free version has more features than most people need, and i recommend that you buy the obd link plus instead. this is my preferred obd2 scanner software for ios devices, and i find it to be one of the most user-friendly obd2 scanner applications on the market. 5ec8ef588b
