When you press the tool, the selection area is now an elliptical shape rather than a straight line. You can pinch to zoom and the tool's selection area proportions remain the same whether you zoom in or out. There are some wonderful new features in Photoshop that recognize faces and make it easy to edit them. Hold an eye or mouth region (ones that are not on the canvas) and select the Eyebrow tool. You can then use the tool to draw a curve or select a point on the face to pull parts of that face into the image. The same is true for Eyes and Mouth tools.

Adobe Photoshop has long restricted users to working on 32-bit images. This is changing in 2021, though, with the new release introducing support for high dynamic range images. These are created by taking multiple images and processing the data to eliminate the need for either an extremely high or low-dynamic-range image. The new release will also feature some much-anticipated browser upgrades. Adobe has been using its own Runtime for HTML as a new part of its Creative Cloud platform, but now it's bringing all the improvements to Photoshop and its associated tools. It's not intended for code updates, but it's a handy way to create websites, apps and even notes quickly and easily. You can edit text, create squares and triangles and compose images in the browser, among other things, and the same happens when you export your web pages or other data. There are also some interesting new browser options, too. The browser APIs create add-on code, or on-demand web apps will no longer need to create a separate app. This will also make it easier for people to create pages without an app; while this won't necessarily start a DevOps revolution, it does mean web pages can get the media player functionality that's baked into it. The tool is also bringing some of its tools for outside video into the browser in 2021. Photoshop has a range of exciting new features in the pipeline for the next release, including a new version of the ACR (Adobe Camera Raw) plug-in, content-aware fill and tools that make it easier to create HDR images.

Adobe has more than 150 million registered desktop customers and more than two billion mobile customers. Photoshop can be used on Windows, macOS and virtually on any device with a web browser.
