

Comments or Discussions Hi, nice post, very informative, I was just searching for this information. This is one of the best blog I have ever encountered in my life. This is the best blog I have ever encountered in my life. This is one of the best blog I have ever encountered in my life. Pika Software Builder is a separate software that is used to create and manage databases. It is used to organize/cut and convert various media files. I wanted to share a few of the best features and uses of Pika Software Builder. Inside Pika Software Builder, you can build databases, create relationships between tables. It's like Microsoft Access, you can set primary keys, foreign keys, you can insert data and back it up all in one step. In this tutorial, we will share how to create a MSSQL database, with file system access. To start, double-click the rpkil2reg.exe file and click run. A dialog box will open asking for confirmation. Click yes. A small window will open, and then close. Now that the database is created, we need to create a few tables. Double-click the INSERT.MSCRE table to open the table's construction editor. Click the new button to create a new table. A wizard will appear, allowing you to pick where you'd like to create the table. Go through the steps listed. Once finished, click Finish to close the table's construction editor. Next, we'll create a new table called images. A new table will appear. Name it images. Click the new button to create a new table. Use the Drop-Down button to change the table's name. Type images in the Name column. Click OK. In the Table Settings section, click the new button. Double-click the INT4 Column to open the table's construction editor. Click the new button to add the INT4 column. For the INT4 column, just select 4 from the Number of Columns drop-down box. Click OK. In the Table Settings section, click the new button to change the table's name. Name the table images. Click the New button to add a new column. Type pikaval in the Name column and click OK. In the Table Settings section, click the new button. Inside the editor, double-click the SQL Server file_type column. Change the
